Sustainable

Reusable and all components 100% recyclable.

Modular

Allows for endless design possibilities and reconfiguration.

Durable

5 Year warranty on all hardware components.

Light-Weight

Easily transported. Save big on shipping and drayage costs.

Tool-less

Displays assembled without any tools.

Time-saving

Quick to set up. No installation team needed.

the system explained

For a more detailed description of the system parts see addendum on page 17

Our tool-less modular fabric displays give you tons of design possibilities to take to your next exhibit. From three-dimensional towers and free-standing billboards to back-walls and booths - let your imagination soar! What's more, the system's materials are extraordinarily light weight, a 30m long wall that stands 2.4m tall, for example, weighs less than 180kg. And the best part? You won't need a single tool to fashion your creations - our patented tensioning devices and modular design makes assembly extremely fast and easy.

Components all fit into practical soft-sided rollerbags for easy transport.

crossbars connect the uprights and hold the tensioners.

tensioners are spring-loaded and apply vertical tension to the fabric print.

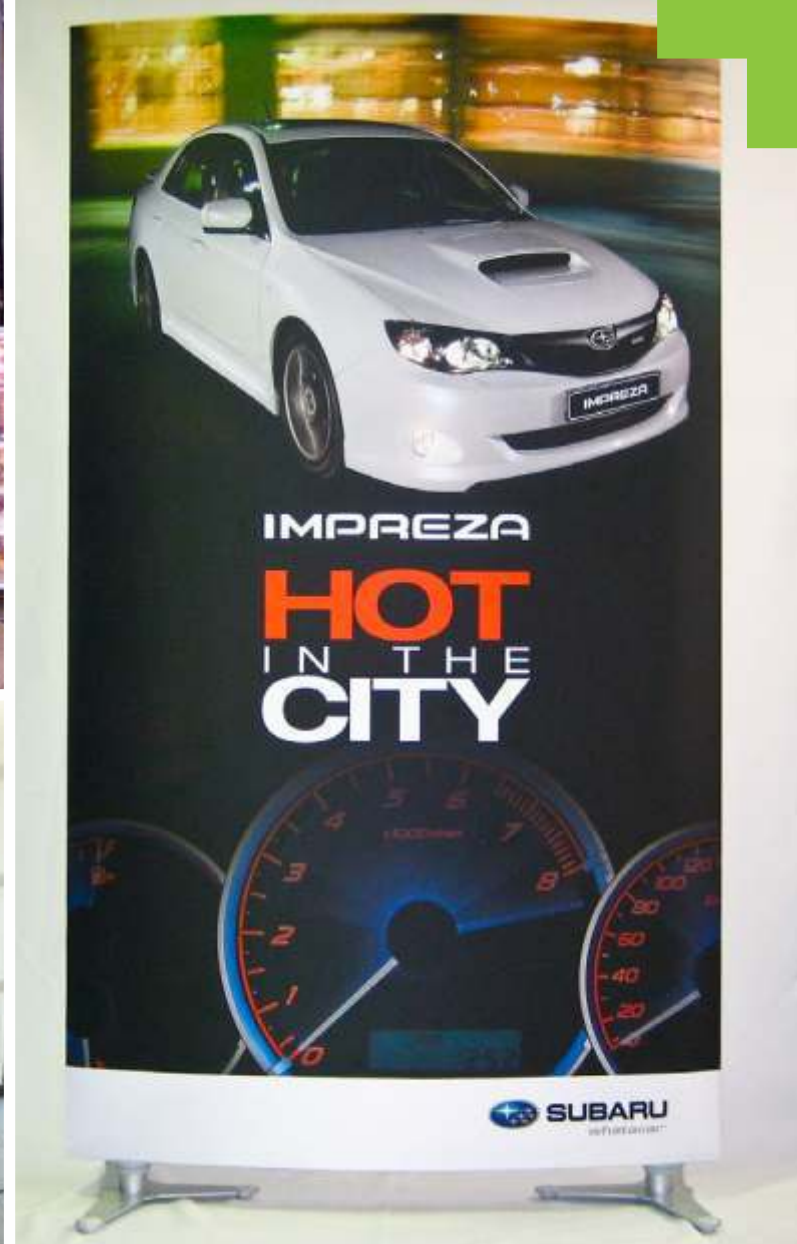

Graphic Rails to hold the graphic in place.

Feet hold up the upright poles and creates vertical support.

Uprights

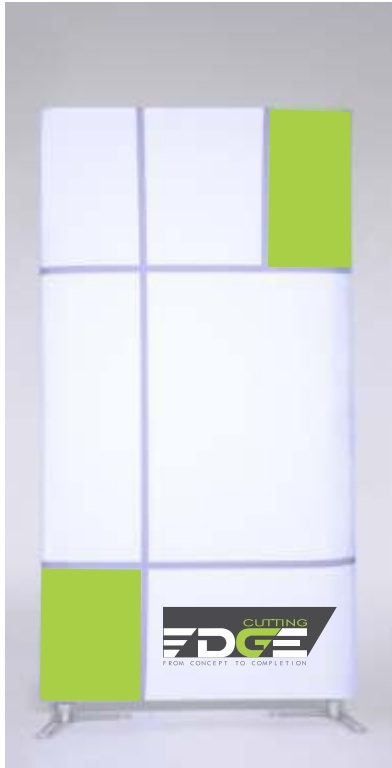

are divided sections (Bottom Uprights and Top Uprights) that can be connected. Crossbars can be connected to the upright poles at different 45° angles.

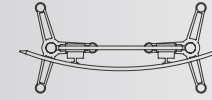

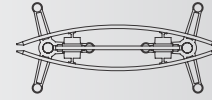

Stand alone Units

Stand Alone Units are available in straight, convex, concave or elliptical shapes and can be built to a variety of heights and various widths up to 3m high and 1.5m wide. It provides an innovative alternative to the one dimensional, conventional retractable banner stands without compromising on the "pack up and go". Being really versatile and customisable, you can even join multiple standard sections together to create a backdrop wall or square tower to suit your unique display requirements. The tensioning system ensures that the graphics are taught and can be displayed on both sides of the system, single or double-sided. Easy print changes ensures that units are reusable.

Walls

Create your own beautiful, seamless indoor billboards, backdrops, room dividers, screens and walls of unlimited length and heights up to 3m (higher custom walls also available). This application provides an innovative solution for exhibitions and event backdrops in multiple venues without incurring major logistical costs and offers you the opportunity to adapt to the unique conditions of the venue. Single or double-sided configurations available. The unique modular structure enables users to reconfigure existing walls by simply using extra components. Walls can also be reconfigured into booths. Add extra flair and innovation through the use of a curved wall made to your specifications. Walls can be concave, convex and even "S" or wave-shaped.

LENGTH VARIATIONS & SHAPE:

NOTE: Walls can be extended to unlimited lengths and sections can be made in a variety of lengths. Prints can be seamless or sectioned.

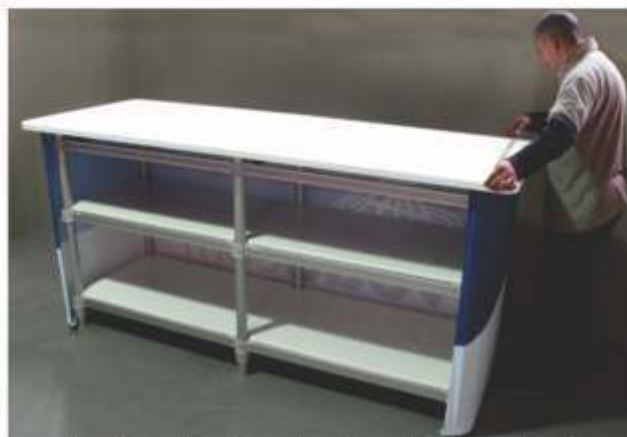

HEIGHT VARIATIONS:

TOWERS

Construct sturdy, freestanding, towers of various shapes and sizes. Available in 3, 4, 6 or even 8 sided configurations, the FSD Tower can be built to any number of heights and widths. Achieve 360 Degree views with seamless, landscape prints that can be wrapped around the entire structure. By using LED or fluorescent tube lighting, towers can be internally or externally illuminated for added effect. Ideally suited for retail applications, showrooms, conferences, events or exhibition environments requiring high impact displays.

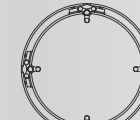

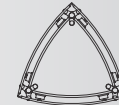

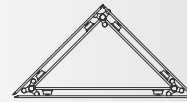

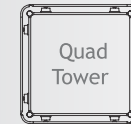

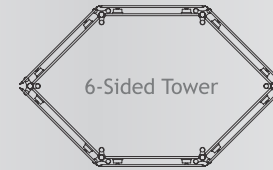

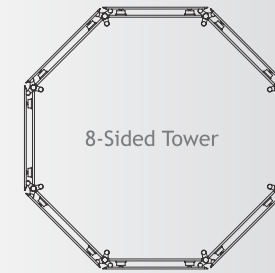

SERVICE COUNTERS

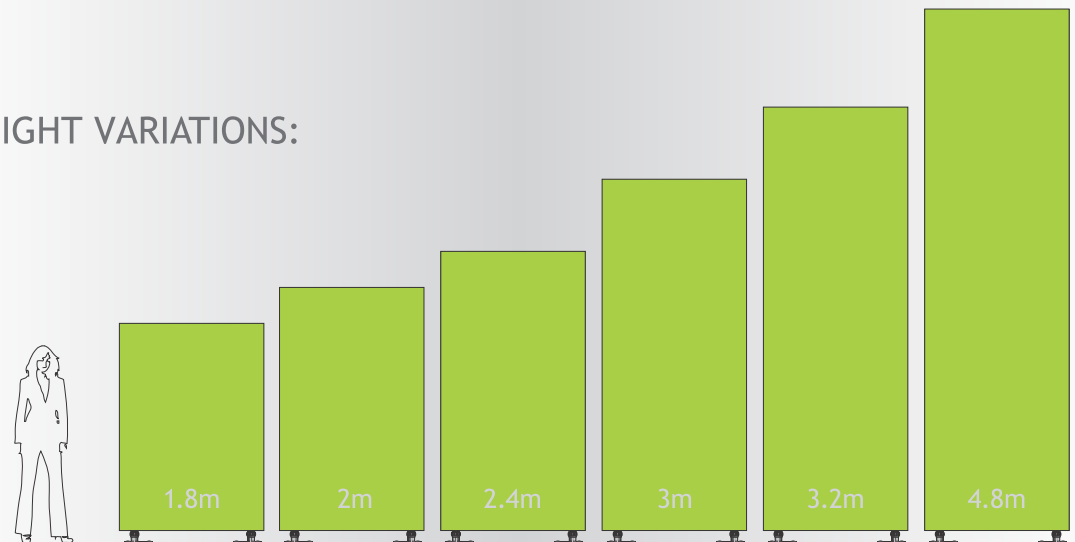

Do you need your brand to stand out at an event or promotion? Are you servicing customers from behind a table and need it to be lightweight, portable and quick to set up? We offer a wide range of standard and custom designed service counter solutions. These stylish, sturdy and portable counters enable you to increase your brand's visual presence with a large printable area. Interior space can be used as storage and designs can include shelves, mounted LCD screens, timber veneered table tops or plexiglass colored translucent tops with back lighting. Bars and service counters are available in both standard and customized shapes and sizes. These are ideal for both indoor as well as outdoor events and promotions. Tabletops can also be branded to your specification from a variety of materials.

WALL MOUNTS

Transform almost any available wall space into fabric billboards of any length, with height determined only by the available space. Wall Mounts can also be applied to both flat and curved surfaces. Our vibrant-looking fabric prints can be rolled or even folded for low cost transportation. Once the tension devices on the display are extended, it automatically pulls the graphic taught over the display. Any restaurant, retail store or hotel owner can now mount our Wall Mounts to client-facing walls, load graphics, and quickly change them out without any tools or special equipment. Many owners are billing key suppliers for this valuable in store advertising space, to help them launch a new product or service.

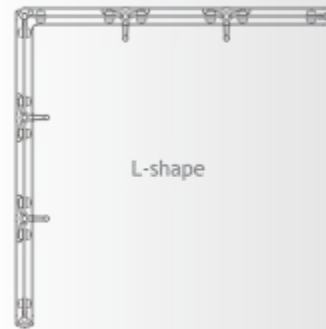

DISPLAY BOOTHS

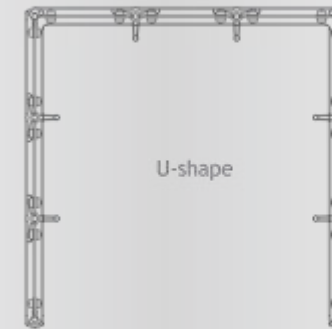

Why hire a standard grey or blue shell display system when you can invest in a ourbooth system branded to your unique requirements? It is light and portable, can be easily transported to different venues and no installation is required. We offer standard or custom display booth options of heights up to 3m and virtually unlimited length. Seamless prints provide maximum visual impact. Quick and easy setup and disassembly requires no tools. To this you can add a service counter or a tower to create a professional and impactful display.

NOTE: Display booths can be made to a wide variety of dimensions and heights. They can also be customized in many ways (see *Customized* page).

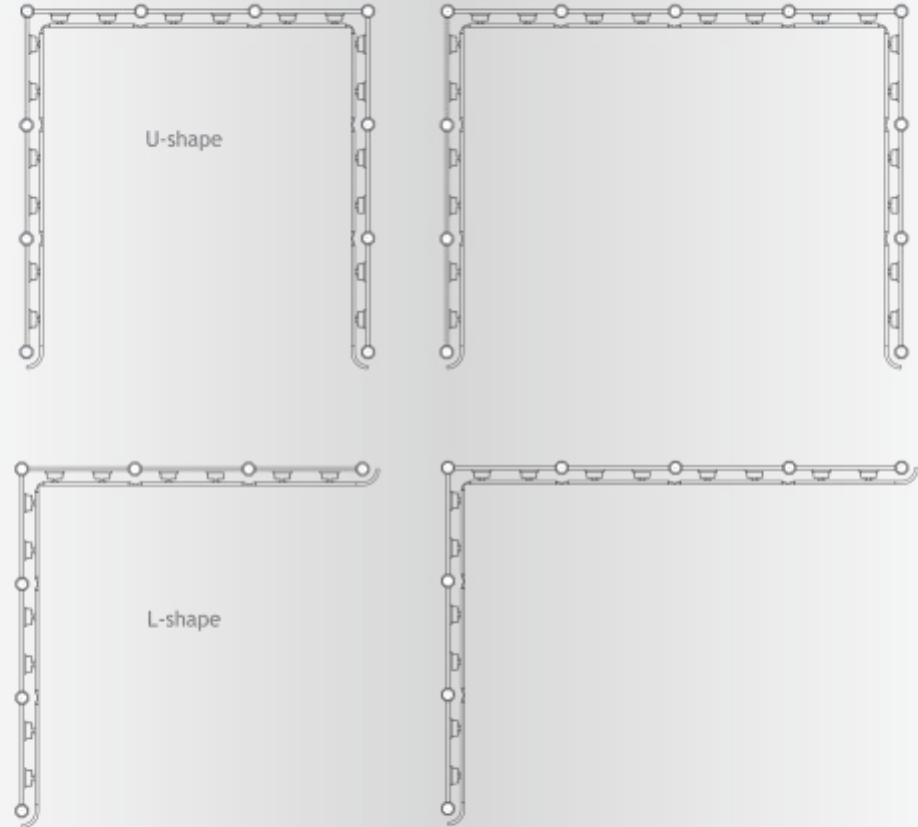

SHELL SCHEME:

FSD has also developed a bracket to fit our print tensioning device to standard shell scheme units. This is a fast and cost effective way to upgrade any shell scheme booth.

SHAPE VARIATIONS:

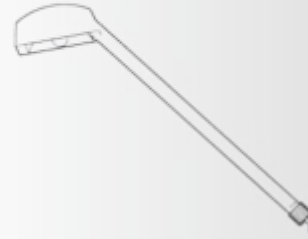

CUSTOMISED

The system lends itself to all kinds of customization, so send us your ideas and we'll work on a customized solution to meet your needs. Besides custom shapes made with our components we can also do: LCD screens fitted to the system, spot lights, LED backlighting or highlighting, shelves or floating shelves, pegs to hang merchandise, combinations of slat walls and our components.

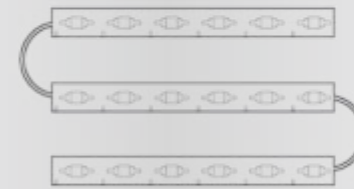

CUSTOM OPTIONS AND ACCESSORIES

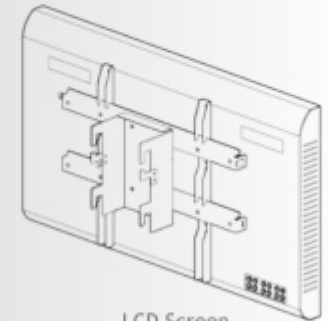

Here are a few examples of customisations that we have done in the past. If you have a different requirement or creative idea, let us know and we will see how we can meet your need.

Spotlights

LED Strip Lighting

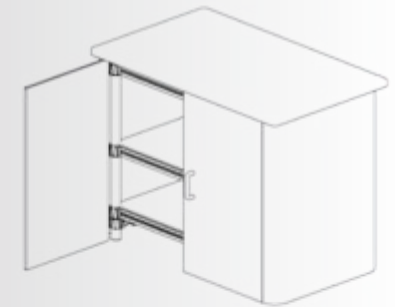

LCD Screen brackets

Range of Brochure Holders

Rigid boards with shelving and hanger rails.

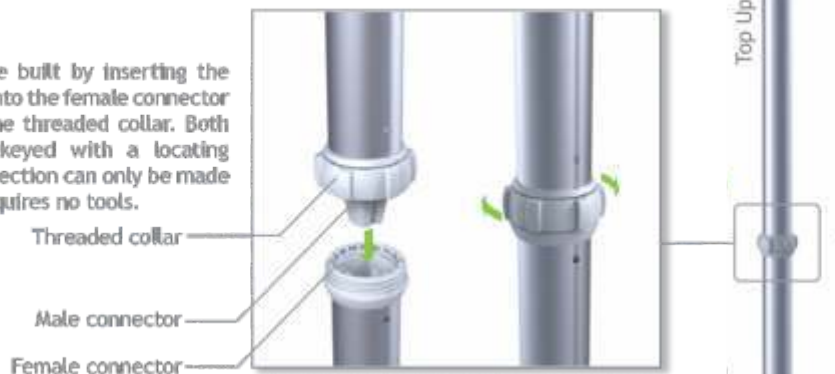

Counters with doors and/or shelves

Vertical structural pieces, typically 1-4 sections, each up to 1,2m long.

Upright poles are built by inserting the male connector into the female connector and tightening the threaded collar. Both connectors are keyed with a locating ridge so the connection can only be made one way. This requires no tools.

Two versions are available. The one is wide for lateral support the other smaller (pictured here) to save weight and cost on systems that are inherently stable.

Cross-bars

Horizontal structural pieces, typically up to 1,5m long.

Graphic-Rails

Horizontal pieces that hold PVC or rubber strips installed in the bottom and top of graphics. Mounted into tensioners, they pull graphics tight when tensioners are activated.

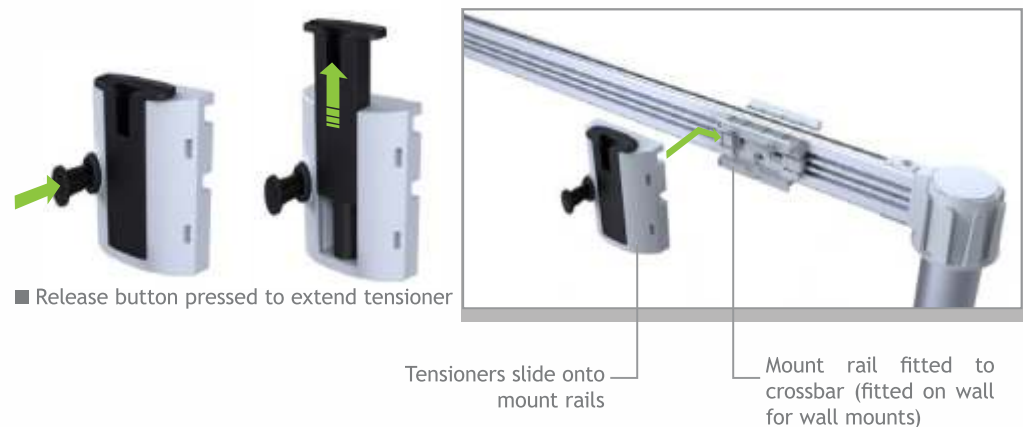

■ Graphic rails can be fitted with either end pieces or corner pieces.

TENSIONERS

The spring-loaded mechanism used to tension the print.

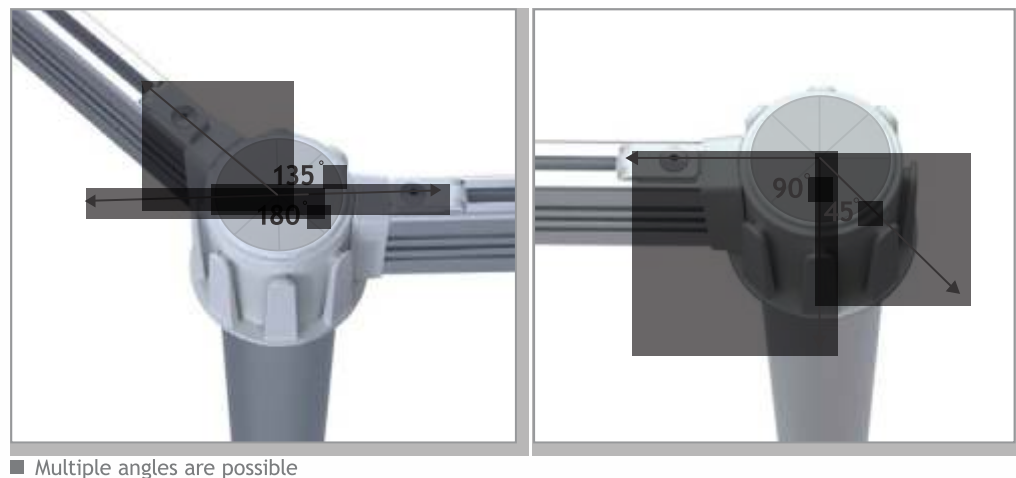

SHELL SCHEME BRACKET

A simple metal bracket mates the tensioners to standard shell-scheme systems to cover the booth walls with tensioned prints.

LINK-CUFFS

Cross-bars are "linked" to uprights by fastening a cross-link to a link-cuff. This is done without tools. Most common "links" are made in-line at 180° (to extend in a straight line) or at 90° (to create a corner).

LCD SCREEN BRACKET

An adjustable metal bracket can mate a variety of LCD screens to the system structure.
